

ForestValue

Small Diameter Wood Utilization With Innovative
Stand Management for Multifunctional Forests
and a Growing Sustainable Bio-economy

Save the date

INTERNATIONAL CONFERENCE

1st of June 2022, Uppsala, SWEDEN

**From economic to environmental and social
aspects of small diameter wood utilization.**

Trees from Small Diameter Stands are a largely underutilized forest resource. We believe that small diameter stands management and different technologies studied have an exciting innovation potential in terms of economy, social aspects, sustainability, business opportunities and rural development. Productivity studies in 4 countries using the same machine and operator have given us a unique opportunity to compare and analyse different aspects. We studied the motivation and willingness of private forest owners and compared the overall sustainability impacts and value-creation effects of the studied technologies.

**Join us to learn more about the main results and
achievements of the SMALLWOOD project.
The conference will be organised as a hybrid event.**

The conference is organised in the frame of the SMALLWOOD project and is free of charge for all participants.

More details will follow. For more information, visit www.smallwood.eu or contact: tomas.nordfjell@slu.se

*(Our conference will take place one day before the Elmia Wood exhibition
<https://www.elmia.se/en/wood/for-visitors/>)*
